

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995. The public sector has also become an important employer of women, with 5.5 million women employed in the public sector in 1995, compared with 4.5 million in 1980.

There are a number of reasons why the public sector has become an important employer of women. One reason is that the public sector has a high proportion of women in its workforce. In 1995, 88% of the public sector workforce were women, compared with 78% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are full-time. In 1995, 68% of the public sector workforce were employed full-time, compared with 58% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are essential to the functioning of the state, such as the police, the fire service, and the health service.

A third reason why the public sector has become an important employer of women is that it has a high proportion of jobs that are well-paid. In 1995, the average salary of a public sector employee was £18,000, compared with £15,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are in the higher grades of the public sector pay scale, such as the senior civil service and the senior judiciary.

There are a number of other reasons why the public sector has become an important employer of women. For example, the public sector has a high proportion of jobs that are secure, and a high proportion of jobs that are in the public sector pension scheme. These factors make the public sector an attractive employer for women, and have helped to explain why the public sector has become an important employer of women in the UK.

The public sector has also become an important employer of women in other countries. For example, in the United States, the public sector has become an important employer of women since the 1970s. In 1995, 4.5 million women were employed in the public sector in the United States, compared with 3.5 million in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are traditionally held by women, such as teaching, nursing, and social work.

Another reason why the public sector has become an important employer of women in the United States is that it has a high proportion of jobs that are full-time. In 1995, 68% of the public sector workforce were employed full-time, compared with 58% in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are essential to the functioning of the state, such as the police, the fire service, and the health service.

A third reason why the public sector has become an important employer of women in the United States is that it has a high proportion of jobs that are well-paid. In 1995, the average salary of a public sector employee was \$28,000, compared with \$22,000 in 1980. This is due to a number of factors, including the fact that the public sector has a high proportion of jobs that are in the higher grades of the public sector pay scale, such as the senior civil service and the senior judiciary.

There are a number of other reasons why the public sector has become an important employer of women in the United States. For example, the public sector has a high proportion of jobs that are secure, and a high proportion of jobs that are in the public sector pension scheme. These factors make the public sector an attractive employer for women, and have helped to explain why the public sector has become an important employer of women in the United States.
