Styled Components on top of JSS

build passing coverage 100% npm v2.2.3 license MIT

Styled-JSS implements a styled-primitives interface on top of [JSS](#). Its API is similar to styled-components but thanks to the JSS core, it supports all features and plugins JSS does. For e.g. you can use full [JSON Syntax](#) inside.

Try it out on [playground](#).

The State of Styles 2019
